## 1 Description

### 1.1 Introduction

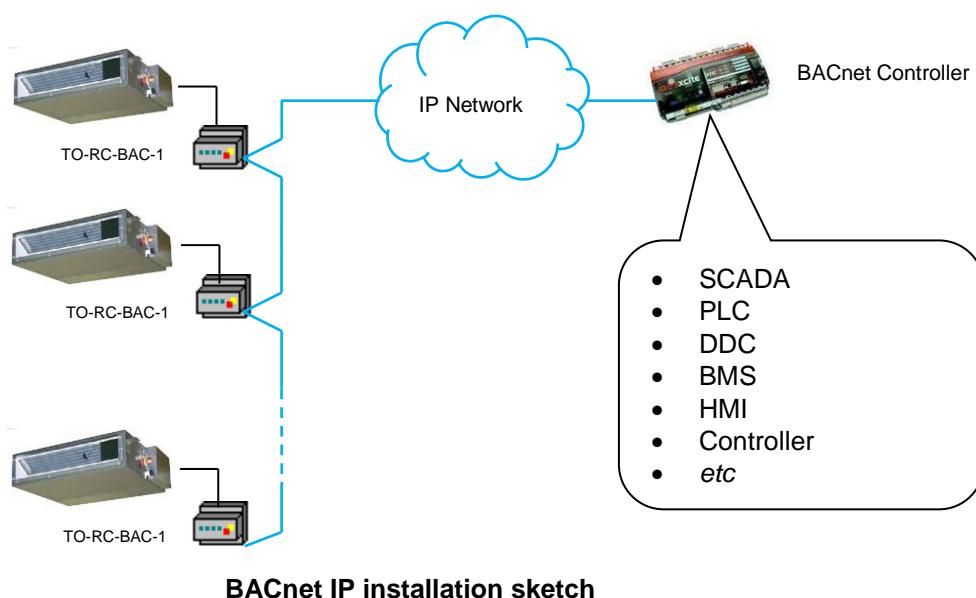

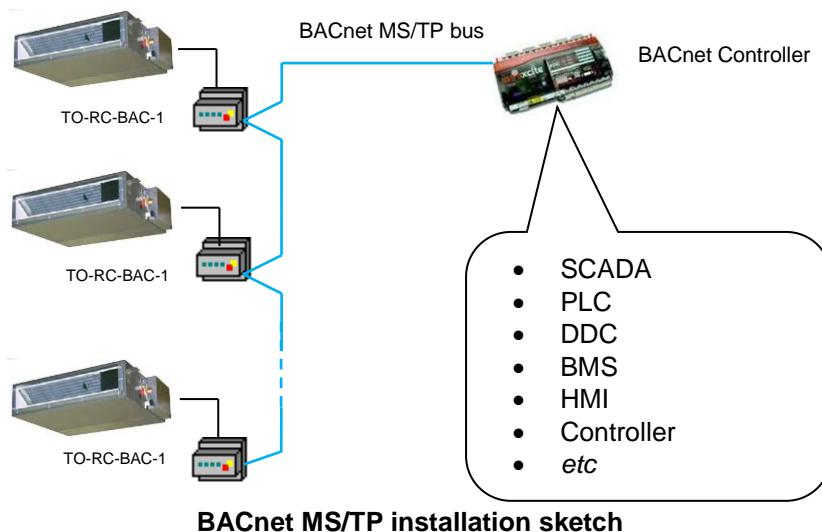

This document describes the integration of Toshiba air conditioning systems into BACnet compatible devices and systems using the *TO-RC-BAC-1* gateway.

The aim of this integration is to monitor and control your Toshiba air conditioning system, remotely, from your Control Center using any commercial SCADA or monitoring software that includes a BACnet driver, or connect it to other BACnet devices to do any automation. To do it so, IntesisBox allows BACnet communication allowing polling or subscription requests (COV).

IntesisBox makes available the Toshiba air conditioning system indoor units through independent BACnet objects.

Abstraction of Toshiba air conditioning system properties and functionalities as fixed BACnet Objects. IntesisBox allows fixed BACnet object IDs mapping. Simple configuration is needed: just select the appropriate communication parameters (MAC address, baud rate...).

This document assumes that the user is familiar with BACnet and Toshiba technologies and their technical terms.

## 1.2 *Functionality*

IntesisBox continuously reads the Toshiba AC system and keeps the updated status of all objects in its memory, ready to be served when requested from the BACnet side.

The role of IntesisBox consists in associate the elements of the Toshiba AC system with BACnet objects.

The control of the indoor units through the TO-RC-BAC-1 is permitted, so commands towards the Toshiba AC units are permitted too.

The indoor unit is offered in a set of BACnet objects and extra functionalities.

## 1.3 *Capacity of IntesisBox*

IntesisBox is capable of integrating one or more Toshiba AC units and its associated elements.

| Element                | Max. | Notes  |
|------------------------|------|--|
| Number of indoor units | 1*   | Number of indoor units that can be controlled through IntesisBox   |
| Number of Objects      | 29   | Number of Toshiba AC signals available as objects into IntesisBox. |

\* NOTE: Keep in mind that more than one unit can be connected to the same TO-RC-BAC-1 gateway. You can control then more than one AC unit, but it will be actuated as a single unit. Different commands to different AC units connected to the same TO-RC-BAC-1 will not be allowed.

## 1.4 *Quick Setup*

1. Install IntesisBox in the desired installation site (DIN rail mounting inside a metallic industrial cabinet connected to ground is recommended).
2. Connect the communication cables. Details in section 0.
3. Connect to the IntesisBox. Details in section 7.5.
4. (Optional) Configure the IntesisBox using the configuration tool. Details in section 7.5.2.
5. Check the BACnet objects list for its integration to your BACnet project. Details in section 5.2.
6. Check if there is communication between BACnet and AC system. Details in section 7.5.3.
7. The IntesisBox is ready to be used in your system.

## 2 Protocol Implementation Conformance Statement

### BACnet Protocol Implementation Conformance Statement (PICS)

**Date:** 2014-12-05

**Vendor Name:** Intesis Software SL

**Product Name:** TO-RC-BAC-1

**Product Model Number:** TO-RC-BAC-1

**Application Software Version:** 1.0

**Firmware Revision:** 1.0.0.0

**BACnet Protocol Revision:** 12

#### Product Description:

Toshiba air conditioning system – BACnet MS/TP & BACnet IP Gateway

Abstraction of Toshiba air conditioning system properties and functionalities as BACnet Objects.

#### 2.1 BACnet Standardized Device Profile (Annex L):

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):  
Reference of BIBBs List

#### 2.2 Segmentation Capability:

Segmented request supported     No     Yes    Window Size · 16 ·  
Segmented responses supported     No     Yes    Window Size · 16 ·

#### 2.3 Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): 9600, 19200, 38400, 76800
- MS/TP slave (Clause 9), baud rate(s):
- Point-To-Point, EIA 232 (Clause 10), baud rate(s):
- Point-To-Point, modem, (Clause 10), baud rate(s):
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

## 2.4 Device Address Binding:

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.)  Yes  No

## 2.5 Networking Options:

- Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
- Annex H, BACnet Tunneling Router over IP
- BACnet/IP Broadcast Management Device (BBMD)  
Does the BBMD support registrations by Foreign Devices?  Yes  No

## 2.6 Character Sets Supported

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- ANSI X3.4
- IBM™/Microsoft™ DBCS
- JIS C 6226
- ISO 10646 (UCS-4)
- ISO 10646 (UCS-2)
- ISO 8859-1

## 2.7 Gateway

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

Toshiba Air Conditioning Units compatible with Digital Inverter & VRF air conditioner lines.

### 3 BACnet Interoperability Building Blocks Supported (BIBBs)

#### 3.1 Data Sharing BIBBs

| BIBB Type |  | Active                              | BACnet Service             | Initiate                            | Execute                             |
|-----------|--|-------------------------------------|----------------------------|-------------------------------------|-------------------------------------|
| DS-RP-A   | Data Sharing-ReadProperty-A            | <input type="checkbox"/>            | ReadProperty               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-RP-B   | Data Sharing-ReadProperty-B            | <input checked="" type="checkbox"/> | ReadProperty               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-RPM-A  | Data Sharing-ReadPropertyMultiple-A    | <input type="checkbox"/>            | ReadPropertyMultiple       | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-RPM-B  | Data Sharing-ReadPropertyMultiple-B    | <input checked="" type="checkbox"/> | ReadPropertyMultiple       | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-RPC-A  | Data Sharing-ReadPropertyConditional-A | <input type="checkbox"/>            | ReadPropertyConditional    | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-RPC-B  | Data Sharing-ReadPropertyConditional-B | <input type="checkbox"/>            | ReadPropertyConditional    | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-WP-A   | Data Sharing-WriteProperty-A           | <input type="checkbox"/>            | WriteProperty              | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-WP-B   | Data Sharing-WriteProperty-B           | <input checked="" type="checkbox"/> | WriteProperty              | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-WPM-A  | Data Sharing-WritePropertyMultiple-A   | <input type="checkbox"/>            | WritePropertyMultiple      | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-WPM-B  | Data Sharing-WritePropertyMultiple-B   | <input checked="" type="checkbox"/> | WritePropertyMultiple      | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-COV-A  | Data Sharing-COV-A                     | <input type="checkbox"/>            | SubscribeCOV               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |  | <input type="checkbox"/>            | ConfirmedCOVNotification   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
|           |  | <input type="checkbox"/>            | UnconfirmedCOVNotification | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-COV-B  | Data Sharing-COV-B                     | <input checked="" type="checkbox"/> | SubscribeCOV               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
|           |  | <input checked="" type="checkbox"/> | ConfirmedCOVNotification   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |  | <input checked="" type="checkbox"/> | UnconfirmedCOVNotification | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-COVP-A | Data Sharing-COVP-A                    | <input type="checkbox"/>            | SubscribeCOV               | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |  | <input type="checkbox"/>            | ConfirmedCOVNotification   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
|           |  | <input type="checkbox"/>            | UnconfirmedCOVNotification | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-COVP-B | Data Sharing-COVP-B                    | <input type="checkbox"/>            | SubscribeCOV               | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
|           |  | <input type="checkbox"/>            | ConfirmedCOVNotification   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |  | <input type="checkbox"/>            | UnconfirmedCOVNotification | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| DS-COVU-A | Data Sharing-COV-Unsolicited-A         | <input type="checkbox"/>            | UnconfirmedCOVNotification | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| DS-COVU-B | Data Sharing-COV-Unsolicited-B         | <input type="checkbox"/>            | UnconfirmedCOVNotification | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

#### 3.2 Alarm and Event Management BIBBs

| BIBB Type |   | Active                   | BACnet Service               | Initiate                            | Execute                             |
|-----------|---|--------------------------|------------------------------|-------------------------------------|-------------------------------------|
| AE-N-A    | Alarm and Event-Notification-A          | <input type="checkbox"/> | ConfirmedEventNotification   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
|           |   | <input type="checkbox"/> | UnconfirmedEventNotification | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| AE-N-I-B  | Alarm and Event-Notification Internal-B | <input type="checkbox"/> | ConfirmedEventNotification   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |   | <input type="checkbox"/> | UnconfirmedEventNotification | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| AE-N-E-B  | Alarm and Event-Notification External-B | <input type="checkbox"/> | ConfirmedEventNotification   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|           |   | <input type="checkbox"/> | UnconfirmedEventNotification | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| AE-ACK-A  | Alarm and Event-ACK-A                   | <input type="checkbox"/> | AcknowledgeAlarm             | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| AE-ACK-B  | Alarm and Event-ACK-B                   | <input type="checkbox"/> | AcknowledgeAlarm             | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| AE-ASUM-A | Alarm and Event-Summary-A               | <input type="checkbox"/> | GetAlarmSummary              | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| AE-ASUM-B | Alarm and Event-Summary-B               | <input type="checkbox"/> | GetAlarmSummary              | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| AE-ESUM-A | Event-Summary-A                         | <input type="checkbox"/> | GetEnrollmentSummary         | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| AE-ESUM-B | Event-Summary-B                         | <input type="checkbox"/> | GetEnrollmentSummary         | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

| Multistate-Value   | 19 | <input checked="" type="checkbox"/> | Occupancy  |
| Notification-Class | 15 | <input type="checkbox"/>            |  |
| Program            | 16 | <input type="checkbox"/>            |  |
| Schedule           | 17 | <input type="checkbox"/>            |  |
| Trend-Log          | 20 | <input type="checkbox"/>            |  |

## 5.2 Member objects

### 5.2.1 Type: Gateway

| Object-name | Description          | Object-type | Object-instance |
|-------------|----------------------|-------------|-----------------|
| TO-RC-BAC-1 | Toshiba AC Interface | Device      | 246000*         |

### 5.2.2 Type: Indoor Unit

| Object-name                   | Description | Object-type | Object-instance |
|-------------------------------|-------------|-------------|-----------------|
| OnOff_status                  |             | BI          | 0               |
| OnOff_command                 |             | BO          | 0               |
| Mode_status                   |             | MI          | 0               |
| Mode_command                  |             | MO          | 0               |
| SetPoint_status               |             | AI          | 0               |
| SetPoint_command              |             | AO          | 0               |
| FanSpeed_status               |             | MI          | 1               |
| FanSpeed_command              |             | MO          | 1               |
| AirDirectionUD_status         |             | MI          | 2               |
| AirDirectionUD_command        |             | MO          | 2               |
| RoomTemperature               |             | AI          | 1               |
| ErrorCode                     |             | AI          | 2               |
| ErrorCodeM                    |             | MI          | 4               |
| ErrorActive                   |             | BI          | 1               |
| OnTimeCounter                 |             | AV          | 0               |
| FilterSign                    |             | AI          | 6               |
| FilterReset                   |             | MI          | 4               |
| Occupancy                     |             | MV          | 0               |
| OccupiedCoolSetPoint          |             | AV          | 1               |
| OccupiedHeatSetPoint          |             | AV          | 2               |
| UnoccupiedCoolSetPoint        |             | AV          | 3               |
| UnoccupiedHeatSetPoint        |             | AV          | 4               |
| OccupancyContinuousCheck      |             | BV          | 0               |
| UnoccupiedDeadbandAction      |             | BV          | 1               |
| RemoteControlProhibit_status  |             | MI          | 6               |
| RemoteControlProhibit_command |             | MO          | 5               |
| RuntimeModeRestriction        |             | MI          | 7               |

\* This is the default value. Check section 5.3 (below) for more information.

## 5.3 Objects and properties

Below you can find relevant information for the objects and properties.

**Object\_Identifier:** In the **Device Object**, is configurable writing directly on the property, either from BACnet or through our configuration tools and can be set automatically or manually. When set automatically, it is set using a base address and the address selected in SW2 P1..P7. The base address can be selected using the configuration tool. When set manually, the address is directly the one configured on the configuration tool. See section 7.4 for more information

**Object\_Name:** In the **Device Object**, is configurable writing directly on this property. This can be done using the configuration tools too. See section 7.4 for more information.

**Description:** In the **Device Object**, is configurable writing directly on the property, length maximum 63 chars. This string is configurable using the configuration tool. See section 7.4 for more information.

### 5.3.1 Toshiba AC Gateway (Device Object Type)

| Property Identifier             | Property Datatype                        | Value                               | ASHRAE | IBOX |

\* Only available when MSTP is used

\*\* Configurable through the configuration tool. See section 7.4 for more information.

### 5.3.2 OnOff\_status (Binary Input Object Type)

It indicates if the indoor unit is in On or Off status.

| Property Identifier       | Property Datatype                 | Value                                       | ASHRAE | IBOX |
|---------------------------|-----------------------------------|---|--------|------|
| Object_Identifier         | BACnetObjectIdentifier            | (Binary Input, 0)                           | R      | R    |
| Object_Name               | CharacterString                   | “OnOff_status”                              | R      | R    |

### 5.3.4 Mode\_status (Multistate Input Object Type)

It indicates the active mode for the indoor unit.

| Property Identifier | Property Datatype                 | Value   | ASHRAE | IBOX |
|---------------------|-----------------------------------|---|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Input, 0)                        | R      | R    |
| Object_Name         | CharacterString                   | “Mode_status”                                 | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_INPUT (13)                         | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 6   | R      | R    |
| Description         | CharacterString                   | -   | O      | -    |
| Device_Type         | CharacterString                   | -   | O      | -    |
| Status_Flags        | BACnetStatusFlags                 | {FALSE, FALSE/TRUE, FALSE, FALSE}             | R      | R    |
| Event_State         | BACnetEventState                  | STATE_NORMAL (0)                              | R      | R    |
| Reliability         | BACnetReliability                 | NO_FAULT_DETECTED (0), UNRELIABLE_OTHER (7)   | O      | R    |
| Out_Of_Service      | BOOLEAN                           | FALSE   | R      | R    |
| Number_Of_States    | Unsigned                          | 6   | R      | R    |
| State_Text          | BACnetArray[N] of CharacterString | Check <b>Mode Status setting table</b> below. | O      | R    |
| Time_Delay          | Unsigned                          | -   | O      | -    |
| Notification_Class  | Unsigned                          | -   | O      | -    |
| Alarm_Values        | List of Unsigned                  | -   | O      | -    |
| Fault_Values        | List of Unsigned                  | -   | O      | -    |
| Event_Enable        | BACnetEventTransitionBits         | -   | O      | -    |
| Acked_Transitions   | BACnetEventTransitionBits         | -   | O      | -    |
| Notify_Type         | BACnetNotifyType                  | -   | O      | -    |
| Event_Time_Stamps   | BACnetArray[N] of BACnetTimeStamp | -   | O      | -    |
| Profile_Name        | CharacterString                   | -   | O      | -    |

#### Mode status setting table

Mode status interpretation is possible using the value in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Heat                             |
| 2            | Cool                             |
| 3            | Fan                              |
| 4            | Dry                              |
| 5            | AutoHeat                         |
| 6            | AutoCool                         |

### 5.3.5 Mode\_command (Multistate Output Object Type)

It allows control over the indoor unit's mode.

| Property Identifier | Property Datatype                 | Value   | ASHRAE | IBOX |
|---------------------|-----------------------------------|---|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Output, 0)                       | R      | R    |

| Acked_Transitions   | BACnetEventTransitionBits         | -  | O      | -    |
| Notify_Type         | BACnetNotifyType                  | -  | O      | -    |
| Event_Time_Stamps   | BACnetArray[N] of BACnetTimeStamp | -  | O      | -    |
| Profile_Name        | CharacterString                   | -  | O      | -    |

#### Fan Speed status setting table

Fan speed interpretation is possible using the value in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Auto                             |
| 2            | Low                              |
| 3            | Mid-1                            |
| 4            | High                             |

### 5.3.9 FanSpeed\_command (Multistate Output Object Type)

It allows control over the fan speed for the indoor unit.

| Property Identifier | Property Datatype                 | Value  | ASHRAE | IBOX |
|---------------------|-----------------------------------|--|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Output, 1)                            | R      | R    |
| Object_Name         | CharacterString                   | “FanSpeed_command”                                 | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_OUTPUT (14)                             | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 4  | W      | W    |
| Description         | CharacterString                   | -  | O      | -    |
| Device_Type         | CharacterString                   | -  | O      | -    |
| Status_Flags        | BACnetStatusFlags                 | {FALSE, FALSE, FALSE, FALSE}                       | R      | R    |

#### Fan Speed command setting table

Fan speed interpretation is possible using the value in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Auto                             |
| 2            | Low                              |
| 3            | Mid-1                            |
| 4            | High                             |

### 5.3.10 AirDirectionUD\_status (Multistate Input Object Type)

It indicates the status of the vertical vane (Up/Down) for the indoor unit.

| Property Identifier | Property Datatype                 | Value  | ASHRAE | IBOX |
|---------------------|-----------------------------------|--|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Input, 2)                                 | R      | R    |
| Object_Name         | CharacterString                   | “AirDirectionUD_status”                                | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_INPUT(13)                                   | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 7  | R      | R    |
| Description         | CharacterString                   | -  | O      | -    |

| Profile_Name        | CharacterString                   | -  | O      | -    |

#### Air direction Up/Down status setting table

Air direction interpretation is possible using the value in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Stop                             |
| 2            | Up                               |
| 3            | Mid-1                            |
| 4            | Mid-2                            |
| 5            | Mid-3                            |
| 6            | Down                             |
| 7            | Swing                            |

### 5.3.11 AirDirectionUD\_command (Multistate Output Object Type)

It allows control over the vertical air direction (Up/Down) for the indoor unit.

| Property Identifier | Property Datatype                 | Value  | ASHRAE | IBOX |
|---------------------|-----------------------------------|--|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Output, 2)                                | R      | R    |
| Object_Name         | CharacterString                   | “AirDirectionUD_command”                               | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_OUTPUT (14)                                 | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 7  | W      | W    |
| Description         | CharacterString                   | -  | O      | -    |
| Device_Type         | CharacterString                   | -  | O      | -    |
| Status_Flags        | BACnetStatusFlags                 | {FALSE, FALSE, FALSE, FALSE}                           | R      | R    |
| Event_State         | BACnetEventState                  | STATE_NORMAL (0)                                       | R      | R    |
| Reliability         | BACnetReliability                 | NO_FAULT_DETECTED (0)                                  | O      | R    |
| Out_Of_Service      | BOOLEAN                           | FALSE  | R      | R    |
| Number_Of_States    | Unsigned                          | 7  | R      | R    |
| State_Text          | BACnetArray[N] of CharacterString | <i>Check Air Direction Command setting table below</i> | O      | R    |

| Event_Time_Stamps   | BACnetArray[N] of BACnetTimeStamp | -  | O      | -    |
| Profile_Name        | CharacterString                   | -  | O      | -    |

#### Air direction Up/Down Command setting table

Air direction commands can be set using the values in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Stop                             |
| 2            | Up                               |
| 3            | Mid-1                            |
| 4            | Mid-2                            |
| 5            | Mid-3                            |
| 6            | Down                             |
| 7            | Swing                            |

### 5.3.12 RoomTemperature (Analog Input Object Type)

It indicates the room temperature from the sensor in the indoor unit.

| Property Identifier | Property Datatype                 | Value   | ASHRAE | IBOX |
|---------------------|-----------------------------------|---|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Analog Input, 1)                               | R      | R    |
| Object_Name         | CharacterString                   | "RoomTemperature"                               | R      | R    |
| Object_Type         | BACnetObjectType                  | ANALOG_INPUT (0)                                | R      | R    |
| Present_Value       | REAL                              | -10...50  | R      | R    |
| Description         | CharacterString                   | -   | O      | -    |
| Device_Type         | CharacterString                   | -   | O      | -    |
| Status_Flags        | BACnetStatusFlags                 | {FALSE, FALSE/TRUE, FALSE, FALSE}               | R      | R    |
| Event_State         | BACnetEventState                  | STATE_NORMAL (0)                                | R      | R    |
| Reliability         | BACnetReliability                 | NO_FAULT_DETECTED (0), UNRELIABLE_OTHER (7)     | O      | R    |
| Out_Of_Service      | BOOLEAN                           | FALSE/TRUE                                      | R      | R    |
| Update_Interval     | Unsigned                          | -   | O      | -    |
| Units               | BACnetEngineeringUnits            | Degrees Celsius (62)<br>Degrees Fahrenheit (64) | R      | R    |
| Min_Pres_Value      | REAL                              | -   | O      | -    |

\* Check section 11 for more information about each error code.

### 5.3.14 ErrorCodeM (Multistate Input Object Type)

It indicates the current error present in the AC system.

| Property Identifier | Property Datatype                 | Value                                | ASHRAE | IBOX |
|---------------------|-----------------------------------|--------------------------------------|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Input, 4)               | R      | R    |
| Object_Name         | CharacterString                   | “ErrorCodeM”                         | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_INPUT(13)                 | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 251                              | R      | R    |
| Description         | CharacterString                   | -                                    | O      | -    |

| Event_Time_Stamps   | BACnetArray[N] of BACnetTimeStamp | -  | O      | -    |
| Profile_Name        | CharacterString                   | -  | O      | -    |

#### Occupancy values table

Check possible Occupancy values in the following correspondence table.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | Occupied                         |
| 2            | Unoccupied                       |
| 3            | Disabled                         |

### 5.3.20 OccupiedCoolSetPoint (Analog Value Object Type)

It indicates the current Setpoint when Cool mode is selected and Occupancy is enabled and the room is occupied. Check section 7.4 for more information.

| Property Identifier | Property Datatype                 | Value                        | ASHRAE | IBOX |
|---------------------|-----------------------------------|------------------------------|--------|------|

| 3            | Mode                             |
| 4            | Mode, OnOff                      |
| 5            | SetPoint                         |
| 6            | SetPoint, OnOff                  |
| 7            | SetPoint, Mode                   |
| 8            | SetPoint, Mode, OnOff            |

### 5.3.28 RuntimeModeRestriction (Multistate Input Object Type)

It indicates the current error present in the AC system.

| Property Identifier | Property Datatype                 | Value                                       | ASHRAE | IBOX |
|---------------------|-----------------------------------|---|--------|------|
| Object_Identifier   | BACnetObjectIdentifier            | (Multi-state Input, 7)                      | R      | R    |
| Object_Name         | CharacterString                   | “RuntimeModeRestriction”                    | R      | R    |
| Object_Type         | BACnetObjectType                  | MULTISTATE_INPUT(13)                        | R      | R    |
| Present_Value       | Unsigned                          | 1 ~ 7                                       | R      | R    |
| Description         | CharacterString                   | -   | O      | -    |
| Device_Type         | CharacterString                   | -   | O      | -    |
| Status_Flags        | BACnetStatusFlags                 | {FALSE, FALSE/TRUE, FALSE, FALSE}           | R      | R    |
| Event_State         | BACnetEventState                  | STATE_NORMAL (0)                            | R      | R    |

| Profile_Name        | CharacterString                   | -   | O      | -    |

### Runtime Mode Restriction

In the table below you will find the restriction correspondence value.

| Pesent_Value | Contents displayed in State_Text |
|--------------|----------------------------------|
| 1            | None                             |
| 2            | Auto                             |
| 3            | Heat                             |
| 4            | Heat, Auto                       |
| 5            | Cool, Dry                        |
| 6            | Cool, Dry, Auto                  |
| 7            | Cool, Dry, Heat, Auto            |

## 6 Connections and switches

### 6.1 Connect to the Remote Controller bus

Disconnect the Toshiba system from Mains Power

Connect the interface to A B bus in any point of the bus. The A B bus is the bus that connects the AC indoor unit and the wired remote controller, is a two-wire bus connecting terminals A B of both. This A B connection has no specific polarity.

**⚠ Important:** Do not modify the length of the cable supplied with the interface, it may affect to the correct operation of the interface

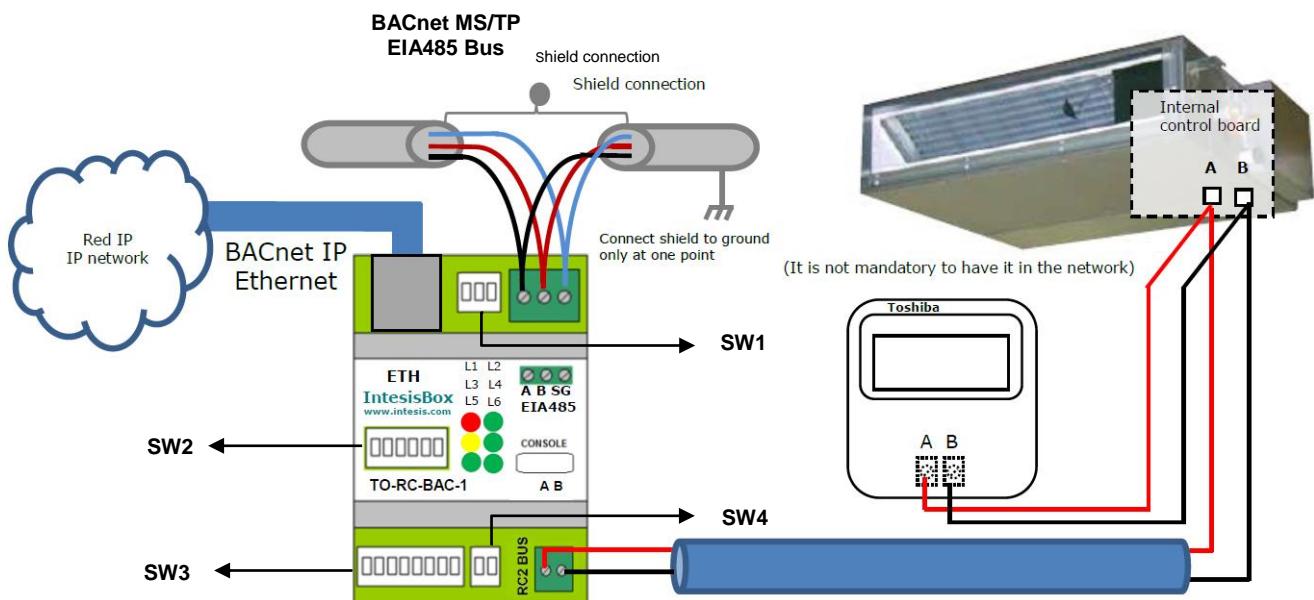

Figure 2.2 Connection diagram

**⚠ Important:** In case of having a Toshiba's Control Panel (not mandatory), DIP switch of the Toshiba Control Panel should be always set into Follower position.

| Switches 1 2 | Function                                 |
|--------------|--|
| ↑↓           | Toshiba's remote controller as Follower. |

Please, check the configuration for the AC unit to ensure proper control of the AC unit according to its specifications. Use **SW4** and **SW3** for that purpose.

#### SW3 - Celsius/Fahrenheit selection

| Binary value b <sub>7</sub> ...b <sub>0</sub> | Decimal value | Switches 1 2 3 4 5 6 7 8 | Description                     |
|---|---------------|--------------------------|---------------------------------|
| xxxx0xxx                                      | 0             | x x x x ↓ x x x          | Celsius degrees (default value) |
| xxxx1xxx                                      | 1             | x x x x ↑ x x x          | Fahrenheit degrees              |

#### SW4 – Fan/Vanes selection

| Binary value b <sub>1</sub> ...b <sub>0</sub> | Decimal value | Switches 1 2 | MAC address                    |
|---|---------------|--------------|--------------------------------|
| 0x  | 0             | ↓ x          | Fan mode not available         |
| 1x  | 1             | ↑ x          | Fan mode available             |
| x0  | 0             | x ↓          | Horizontal vanes not available |
| x1  | 1             | x ↑          | Horizontal vanes available     |

**⚠ Important:** Remember that switch changes only apply after an IntesisBox power cycle

## 6.2 Connect to BACnet MS/TP

Connect the EIA485 bus wires to the plug-in terminal block (EIA485) of TO-RC-BAC-1; respect the polarity on this connection (A+ and B-).

Connect the ground signal to the plug-in terminal block (SG).

Respect the maximum distance of 1.200 meters for the bus, no loop or star topologies are allowed for EIA485 bus.

Remember that a terminator resistor of  $120\ \Omega$  must be present at each end of the bus to avoid signal reflections and also a polarization mechanism. Please, use switch **SW1** in order to configure these parameters.

| Binary value<br>$b_2\dots b_0$ | Decimal<br>value | Switches<br>1 2 3 | Description  |
|--------------------------------|------------------|-------------------|--|
| 0xx                            | 0                | ↓ x x             | EIA485 bus without termination resistor. The gateway is not at one end of the EIA485 bus (default value) |
| 1xx                            | 1                | ↑ x x             | $120\ \Omega$ termination resistor active. The gateway is at one end of the EIA485 bus                   |
| x00                            | 0                | x↓↓               | No bus polarization  |
| x11                            | 3                | x↑↑               | Bus polarization active  |

Please, check as well configuration on **SW2** and **SW3** before connecting to BACnet MS/TP.

### 6.2.1 MS/TP MAC address switch configuration

MAC address can be configured using **SW2** DIP-Switch

| Binary value<br>$b_7\dots b_0$ | Decimal value | Switches<br>1 2 3 4 5 6 7 8 | MAC address |
|--------------------------------|---------------|-----------------------------|-------------|
| 0000000x                       | 0             | ↓ ↓ ↓ ↓ ↓ ↓ ↓ x             | 0           |
| 1000000x                       | 1             | ↑ ↓ ↓ ↓ ↓ ↓ ↓ x             | 1           |
| 0100000x                       | 2             | ↓ ↑ ↓ ↓ ↓ ↓ ↓ x             | 2           |
| 1100000x                       | 3             | ↑ ↑ ↓ ↓ ↓ ↓ ↓ x             | 3           |
| ....                           | ....          | ....                        | ...         |
| 1011111x                       | 125           | ↑ ↓ ↑ ↑ ↑ ↑ ↑ x             | 125         |
| 0111111x                       | 126           | ↓ ↑ ↑ ↑ ↑ ↑ ↑ x             | 126         |
| 1111111x                       | 127           | ↑ ↑ ↑ ↑ ↑ ↑ ↑ x             | 127         |

The MAC address selected my affect on the Device Instance. If the “Auto Device Instance” is used, keep in mind that the Device Instance will be build using the “Device Instance Base” + the address selected in SWP2 P1-P7. Please, check section 7.4 for more information.

### 6.2.2 MS/TP activation and baudrate

Select the right baudrate for BACnet MS/TP communication using switch **SW3**.

| Binary value<br>$b_7\dots b_0$ | Decimal<br>value | Switches<br>1 2 3 4 5 6 7 8 | Description                         |
|--------------------------------|------------------|-----------------------------|-------------------------------------|
| 0xxxxxxx                       | 0                | ↓ x x x x x x x             | BACnet MS/TP active (default value) |
| 1xxxxxxx                       | 1                | ↑ x x x x x x x             | BACnet IP active                    |
| x000xxxx                       | 0                | x↓↓↓x x x x                 | Autobaudrate (default value) *      |
| x100xxxx                       | 1                | x↑↓↓x x x x                 | 9600 bps                            |
| x010xxxx                       | 2                | x↓↑↓x x x x                 | 192000 bps                          |
| x110xxxx                       | 3                | x↑↑↓x x x x                 | 38400 bps                           |
| x001xxxx                       | 4                | x↓↓↑x x x x                 | 57600 bps                           |
| x101xxxx                       | 5                | x↑↓↑x x x x                 | 76800 bps                           |
| x011xxxx                       | 6                | x↓↑↑x x x x                 | 115200 bps                          |
| x111xxxx                       | 7                | x↑↑↑x x x x                 | Autobaudrate *                      |
| xxxx0xxx                       | 0                | x x x x ↓ x x x             | Celsius degrees (default value)     |
| xxxx1xxx                       | 1                | x x x x ↑ x x x             | Fahrenheit degrees                  |

**⚠ Important:** Remember that switch changes only apply after an IntesisBox power cycle

\* Note: If Autobaudrate is selected, the TO-RC-BAC-1 will look for another BACnet MS/TP device with a fixed baudrate in order to match this value. Once detected, the baudrate will not be modified until a device reset is produced.

## 6.3 Connect to BACnet IP

Connect the RJ45 connector to the Ethernet connection (ETH) of TO-RC-BAC-1.

Respect same recommendations as per any other Ethernet communication network.

Remember to activate the IP interface through the **SW3** switch.

| Binary value<br>b <sub>7</sub> ...b <sub>0</sub> | Decimal value | Switches<br>1 2 3 4 5 6 7 8 | Description                         |
|--|---------------|-----------------------------|-------------------------------------|
| 0xxxxxx  | 0             | ↓ x x x x x x x             | BACnet MS/TP active (default value) |
| 1xxxxxx  | 1             | ↑ x x x x x x x             | BACnet IP active                    |

By default, the TO-RC-BAC-1 comes with a static IP address: **192.168.100.246**.

In order to change it, please use the configuration tool and select either DHCP or another static IP (recommended) that suits your integration project requirements. Check section 7.4 for more information.

### 6.3.1 BACnet Device Instance

If the “Auto Device Instance” is used, keep in mind that the Device Instance will be build using the “Device Instance Base” + the address selected in SWP2 P1-P7.

| Binary value<br>b <sub>7</sub> ...b <sub>0</sub> | Decimal value | Switches<br>1 2 3 4 5 6 7 8 | MAC address |
|--|---------------|-----------------------------|-------------|
| 0000000x   | 0             | ↓ ↓ ↓ ↓ ↓ ↓ x               | 0           |
| 1000000x   | 1             | ↑ ↓ ↓ ↓ ↓ ↓ x               | 1           |
| 0100000x   | 2             | ↓ ↑ ↓ ↓ ↓ ↓ x               | 2           |
| 1100000x   | 3             | ↑ ↑ ↓ ↓ ↓ ↓ x               | 3           |
| ....   | ....          | ....                        | ...         |
| 1011111x   | 125           | ↑ ↓ ↑ ↑ ↑ ↑ x               | 125         |
| 0111111x   | 126           | ↓ ↑ ↑ ↑ ↑ ↑ x               | 126         |
| 1111111x   | 127           | ↑ ↑ ↑ ↑ ↑ ↑ x               | 127         |

**⚠ Important:** Remember that switch changes only apply after an IntesisBox power cycle

## 7 Set-up process and troubleshooting

### 7.1 Pre-requisites

In a BACnet MS/TP integration, it is necessary to have the BACnet MS/TP Master device operative and well connected to the BACnet MS/TP port of the TO-RC-BAC-1.

In a BACnet IP integration, it is necessary to have the BACnet IP client operative and well connected to the IP network and the TO-RC-BAC-1 connected to this same IP network through the ETH port.

Items supplied by Intesis Software for this integration are:

- IntesisBox TO-RC-BAC-1 interface with Toshiba AC external protocol firmware loaded.
- Specific connection cable to connect Toshiba AC unit with TO-RC-BAC-1 gateway.
- MiniUSB cable for console communication.
- Product documentation.

### 7.2 Physical checking

First point to look at to make sure that gateway is working properly is to check physical connections:

1.- Make sure that the supplied cable is correctly connected between the AC unit and the gateway. TO-RC-BAC-1 needs to be connected to the AC unit or externally powered before start the device configuration. Contact Intesis if you need to power your device without connecting it to the AC unit.

2.- Check that the AC unit is connected to mains.

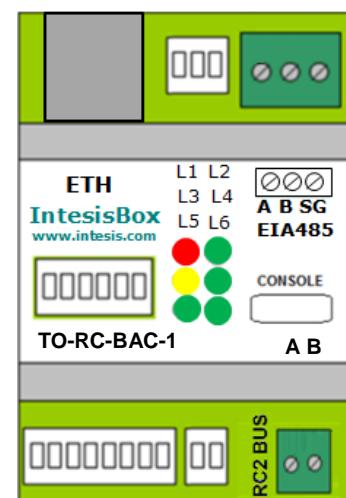

3.- If using BACnet MS/TP, check the EIA485 connection from the gateway to the BACnet MS/TP. Remember to verify polarity and terminal resistors configuration. If using BACnet IP, check the IP network connections.

### 7.3 LED status

On start up, all leds blink once and then turn off. After that, depending on the type of connection (MS/TP or IP) and the processes carried out, LED status may change.

Please, check the table below for more information:

| LED           | Status          | Description                        |
|---------------|-----------------|------------------------------------|
| L1<br>(red)   | ON Steady       | AC communication error             |
|               | Blinking        | AC error                           |
|               | Off             | No errors present                  |
| L5<br>(green) | ON Steady       | BACnet MS/TP link                  |
|               | Blinking        | Activity on the BACnet MS/TP bus   |
| L6<br>(green) | ON Steady       | Ethernet link                      |
|               | Blinking        | Activity on BACnet IP              |
| L1+L4+L5      | Blinking        | Device in Bootloader mode          |
| All           | Blinking        | Fatal Error                        |
| All           | On Steady 1 sec | On start up (for testing purposes) |

## 7.4 Occupancy

Each indoor unit has its own occupancy signal. Remember that this signals needs to be feed by an external sensor which indicates if there is presense or not (occupancy). This signal is processed directly in the TO-RC-BAC-1.

When occupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > OCS: Setpoint = OCS, Mode = Cool, On/Off = On
- Room Temperature < OHS: Setpoint = OHS, Mode = Heat, On/Off = On
- OCS < Room Temperature > OHS: Setpoint = OCS/OHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On

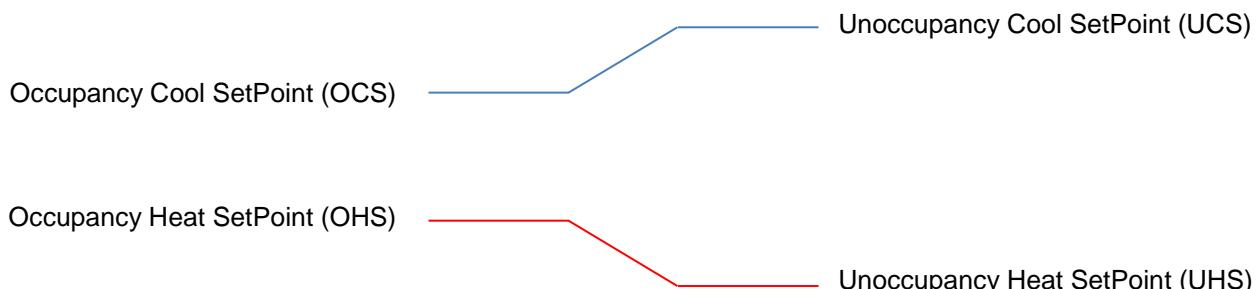

When unoccupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > UCS: Setpoint = UCS, Mode = Cool, On/Off = On
- Room Temperature < UHS: Setpoint = UHS, Mode = Heat, On/Off = On
- UCS < Room Temperature > UHS: Setpoint = UCS/UHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On (if Unoccupancy Deadband Action is = 1)

These checks will be done each time the indoor unit occupancy status is changed, and if **check continuously** checkbox is checked, also each time the room temperature changes.

The configuration set on the occupancy signals is applied from the very first moment the occupancy signal is enabled until the user changes the setpoint, mode or the On/Off signal, which disables occupancy functionality.

The minimum difference between Cool and Heat SetPoints must be 2°C/4°F.

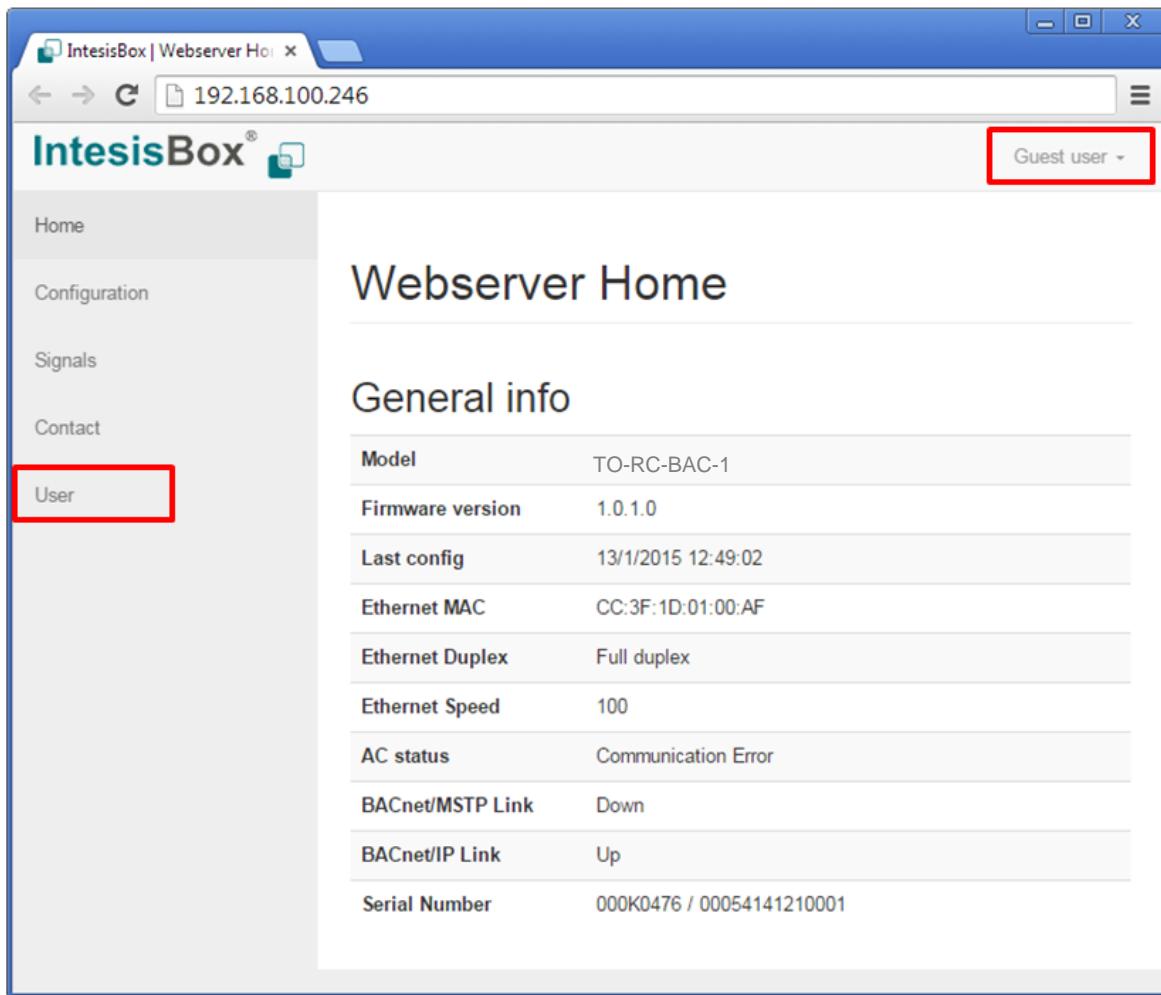

## 7.5 Configuration tool

In order to check the status of the device, signals values and general configuration, the TO-RC-BAC-1 includes a configuration tool. This tool is accessible only through the Ethernet port, so keep in mind that you need to switch **SW3 P1 'ON'**.

By default the device comes with a static IP, so please check that you are in the same network domain in order to connect. The default IP is: **192.168.100.246**.

### 7.5.1 Home

Once you reach the page, remember to login with your user and password. To access the login site, click on "User" or use the drop down menu on the top right corner for user selection.

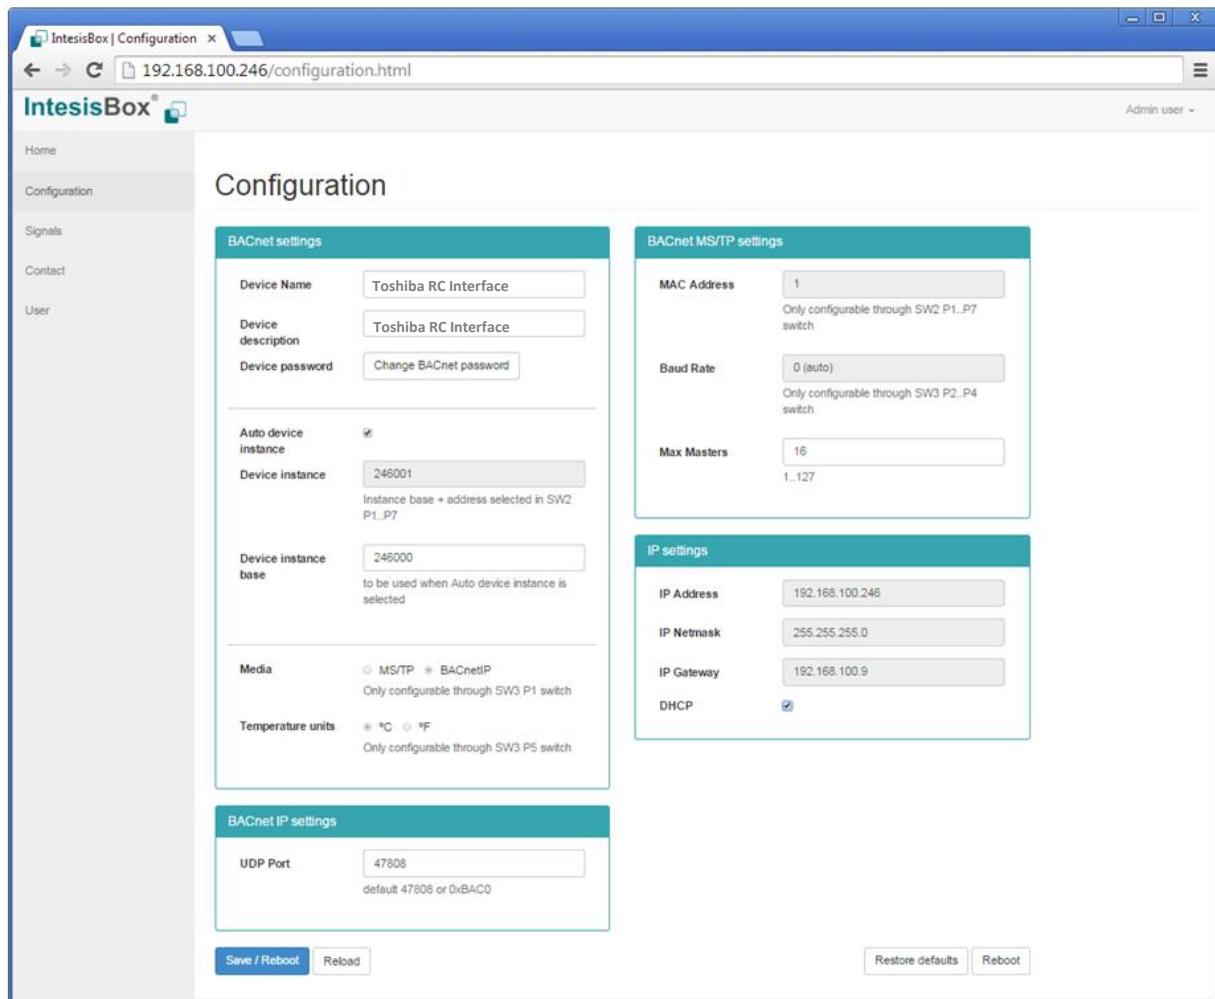

There are two access levels: **admin** and **operator**. The default password value for each user is **admin** → admin and **operator** → operator.

Admin has total control on the device configuration and it can control the AC unit from the web app itself. On the contrary, operator can only read information from the current configuration and can operate the AC. Priority used when using the operator mode is always set to 8.

**IMPORTANT:** Once configuration is done, we recommend changing the passwords to ensure access control on the gateway.

## 7.5.2 Configuration

On the configuration section, general **BACnet settings**, specific **BACnet MS/TP** and **BACnetIP settings**, **IP settings** and **AC settings** can be configured. Each type of parameter is grouped in different blocks.

## 7.5.3 Signals

On this section a complete list of the available BACnet objects, their **type**, **Object Instance**, **priority** and current **value** is shown. Clinking on the “**Edit**” button, users will be able to command the system having feedback from both BACnet and AC system.

It also allows continuous monitoring of the current status of the variables. The refresh time for the AC information is shown using a progression bar in the top and the bottom of the signals list.

| Name                   | Type | Inst. | RW | Priority | Value    | Actions     |
|------------------------|------|-------|----|----------|----------|-------------|
| OnOff_status           | BI   | 0     | R  |          | Off      |             |
| OnOff_command          | BO   | 0     | W  | RD       | -        | <b>Edit</b> |
| Mode_status            | MI   | 0     | R  |          | AutoCool |             |
| Mode_command           | MO   | 0     | W  | RD       | -        | <b>Edit</b> |
| SetPoint_status        | AI   | 0     | R  |          | -35 °C   |             |
| SetPoint_command       | AO   | 0     | W  | RD       | - °C     | <b>Edit</b> |
| FanSpeed_status        | MI   | 1     | R  |          | Auto     |             |
| FanSpeed_command       | MO   | 1     | W  | RD       | -        | <b>Edit</b> |
| AirDirectionUD_status  | MI   | 2     | R  |          | Stop     |             |
| AirDirectionUD_command | MO   | 2     | W  | RD       | -        | <b>Edit</b> |

When you click on “Edit”, you will have the chance of introducing a new **value** to be applied and also the **priority**.

| Name                   | Type | Inst. | RW | Priority | Value       | Actions       |
|------------------------|------|-------|----|----------|-------------|---------------|
| OnOff_status           | BI   | 0     | R  |          | Off         |               |
| OnOff_command          | BO   | 0     | W  | RD       | -           | <b>Edit</b>   |
| Mode_status            | MI   | 0     | R  |          | AutoCool    |               |
| Mode_command           | MO   | 0     | W  | 8        | <b>Save</b> | <b>Cancel</b> |
| SetPoint_status        | AI   | 0     | R  |          | Heat        |               |
| SetPoint_command       | AO   | 0     | W  | RD       | Cool        | <b>Edit</b>   |
| FanSpeed_status        | MI   | 1     | R  |          | Fan         |               |
| FanSpeed_command       | MO   | 1     | W  | RD       | Dry         | <b>Edit</b>   |
| AirDirectionUD_status  | MI   | 2     | R  |          | Auto        |               |
| AirDirectionUD_command | MO   | 2     | W  | RD       | -           | <b>Edit</b>   |

**NOTE:** If you want to relinquish the selected priority, please use the ‘--’ command.

## 8 AC Unit Types compatibility

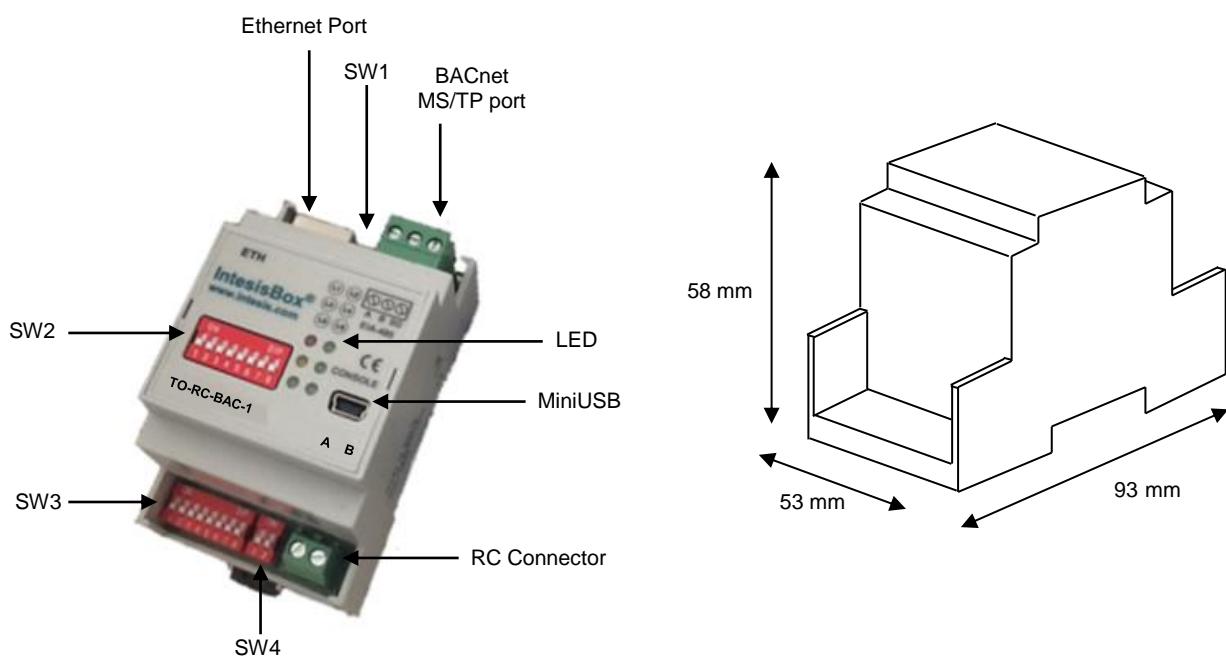

Please, check compatibility list at to know which Toshiba units are compatible with our gateway.

## 9 Mechanical & electrical characteristics

|   |   |
|---|---|
| <b>Enclosure</b>  | Plastic, type PC (UL 94 V-0). Dimensions: 93mm x 53mm x 58mm. Weight: 85 g  |
| <b>Color</b>  | Light Grey. RAL 7035.   |
| <b>Terminal wiring (for power supply and low-voltage signals)</b> | Per terminal: solid wires or stranded wires (twisted or with ferrule)<br>1 core: 0.5 ... 2.5mm <sup>2</sup><br>2 cores: 0.5 ... 1.5mm <sup>2</sup><br>3 cores: not permitted  |
| <b>Console Port</b>   | Mini USB port for console usage   |
| <b>Mounting</b>   | Wall.<br>DIN rail EN60715 TH35.   |
| <b>BACnet MS/TP port</b>  | 1 x EIA485 Plug-in screw terminal block (2 poles + GND)   |
| <b>BACnet IP port</b>   | 1 x Ethernet 100BT RJ45.  |
| <b>LED indicators</b>   | 6 x Gateway/Communication status  |
| <b>Operational temperature</b>                                    | 0°C to +40°C  |
| <b>Operational humidity</b>                                       | 5% to 95%, non-condensing   |
| <b>Isolation Voltage</b>  | 4000 VDC (between AC unit and EIA-485)<br>1000 VDC (between AC unit and USB)  |
| <b>Protection</b>   | IP20 (IEC60529).  |
| <b>RoHS conformity</b>  | Compliant with RoHS directive (2002/95/CE).   |
| <b>Certifications</b>   | CE conformity to EMC directive (2004/108/EC) and Low-voltage directive (2006/95/EC)<br>EN 61000-6-1 ;EN 61000-6-3; EN 60950-1; EN 50491-3<br><br>This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:<br>1) This device may not cause harmful interference<br>2) This device must accept any interference received, including interference that may cause undesired operation. |

## 10 Dimensions

## 11 Error codes

Below you can find a list of error codes from Toshiba air conditioning system.

| ErrorCode | Error CodeM | Error in RC | Error Category                   | Error Description  |
|-----------|-------------|-------------|----------------------------------|--|
| 0         | N/A         | N/A         | TO-RC-BAC-1<br>GHP Engine Issues | No active error  |
| 01        | A01         | A01         |                                  | GHP - Engine oil pressure fault  |
| 02        | A02         | A02         |                                  | GHP - Engine oil level fault   |
| 03        | A03         | A03         |                                  | GHP - Engine over speed  |
| 04        | A04         | A04         |                                  | GHP - Engine under speed   |
| 05        | A05         | A05         |                                  | GHP - Ignition power supply failure  |
| 06        | A06         | A06         |                                  | GHP - Engine start up failure  |
| 07        | A07         | A07         |                                  | GHP - Fuel gas valve failure   |
| 08        | A08         | A08         |                                  | GHP - Engine stalled   |
| 09        | A09         | A09         |                                  | GHP - Engine overload  |
| 0A        | A10         | A10         |                                  | GHP - High exhaust gas temp  |
| 0B        | A11         | A11         |                                  | GHP - Engine oil level failure   |
| 0C        | A12         | A12         |                                  | GHP - Throttle actuator fault  |
| 0D        | A13         | A13         |                                  | GHP - Fuel gas valve adjustment failure  |
| 0E        | A14         | A14         |                                  | GHP - Engine oil pressure sensor fault   |
| 0F        | A15         | A15         |                                  | GHP - Starter power output short circuit   |
| 10        | A16         | A16         |                                  | GHP - Starter motor locked   |
| 11        | A17         | A17         |                                  | GHP - Starter current (CT) coil failed   |
| 13        | A19         | A19         |                                  | GHP - Wax Valve (3 Way) fault  |
| 14        | A20         | A20         |                                  | GHP - Cooling water temp high  |
| 15        | A21         | A21         |                                  | GHP - Cooling water level fault  |
| 16        | A22         | A22         |                                  | GHP - Cooling water pump fault   |
| 17        | A23         | A23         |                                  | GHP - Engine crank angle sensor failure  |
| 18        | A24         | A24         |                                  | GHP - Engine cam angle sensor failure  |
| 19        | A25         | A25         |                                  | GHP - Clutch fault   |
| 1A        | A26         | A26         |                                  | GHP - Misfire  |
| 1B        | A27         | A27         |                                  | GHP - Catalyst temperature fault   |
| 1C        | A28         | A28         |                                  | GHP - Generator fault  |
| 1D        | A29         | A29         |                                  | GHP - Converter fault  |
| 1E        | A30         | A30         |                                  | GHP - Fuel gas pressure low  |
| 21        | C01         | C01         | Central Controller Issues        | Duplicated setting of control address  |
| 22        | C02         | C02         |                                  | Central control number of units mis-matched  |
| 23        | C03         | C03         |                                  | Incorrect wiring of central control  |
| 24        | C04         | C04         |                                  | Incorrect connection of central control  |
| 25        | C05         | C05         |                                  | System Controller fault, error in transmitting comms signal, i-door or o-door unit not working, wiring fault |

|    |     |     |                                       |  |
|----|-----|-----|---------------------------------------|--|
| 26 | C06 | C06 |                                       | System Controller fault, error in receiving comms signal, i/door or o/door unit not working, wiring fault, CN1 not connected correctly                       |
| 2C | C12 | C12 |                                       | Batch alarm by local controller  |
| 30 | C16 | C16 |                                       | Transmission error from adaptor to unit  |
| 31 | C17 | C17 |                                       | Reception error to adaptor from unit   |
| 32 | C18 | C18 |                                       | Duplicate central address in adaptor   |
| 33 | C19 | C19 |                                       | Duplicate adaptor address  |
| 34 | C20 | C20 |                                       | Mix of PAC & GHP type units on adaptor   |
| 35 | C21 | C21 |                                       | Memory fault in adaptor  |
| 36 | C22 | C22 |                                       | Incorrect address setting in adaptor   |
| 37 | C23 | C23 |                                       | Host terminal software failure   |
| 38 | C24 | C24 |                                       | Host terminal hardware failure   |
| 39 | C25 | C25 |                                       | Host terminal processing failure   |
| 3A | C26 | C26 |                                       | Host terminal communication failure  |
| 3C | C28 | C28 |                                       | Reception error of S-DDC from host terminal  |
| 3D | C29 | C29 |                                       | Initialization failure of S-DDC  |
| 3F | C31 | C31 |                                       | Configuration change detected by adaptor   |
| 41 | E01 | E01 | Addressing and Communication Problems | Remote control detecting error from indoor unit, Address not set/Auto address failed. Check interconnecting wiring etc. Re-address system.                   |
| 42 | E02 | E02 |                                       | Remote detecting error from indoor unit,   |
| 43 | E03 | E03 |                                       | Indoor unit detecting error from remote,   |
| 44 | E04 | E04 |                                       | Indoor seeing error from outdoor. Qty of i/d units connected are less than qty set. Check; all i/d units are ON, reset turn off all units wait 5min power up |
| 45 | E05 | E05 |                                       | Indoor unit detecting error from outdoor unit, Error in sending comms signal   |
| 46 | E06 | E06 |                                       | Outdoor unit detecting error from indoor unit, Error in receiving comms signal   |
| 47 | E07 | E07 |                                       | Outdoor unit detecting error from indoor unit, Error in sending comms signal   |
| 48 | E08 | E08 |                                       | Incorrect setting indoor/controller, Indoor address duplicated   |
| 49 | E09 | E09 |                                       | Incorrect setting indoor/controller, Remote address duplicated or IR wireless controller not disabled  |
| 4A | E10 | E10 |                                       | Indoor unit detecting error from 'option' plug, Error in sending comms signal  |
| 4B | E11 | E11 |                                       | Indoor unit detecting error from 'option' plug, Error in receiving comms signal  |
| 4C | E12 | E12 |                                       | Auto addressing failed, Auto address connector CN100 shorted during auto addressing  |
| 4D | E13 | E13 |                                       | Indoor unit failed to send signal to remote controller   |
| 4E | E14 | E14 |                                       | Setting Failure, Duplication of master indoor units  |

|    |     |     |               |  |
|----|-----|-----|---------------|--|
| 4F | E15 | E15 |               | Auto addressing failed, Number of indoor units connected are less than number set  |
| 50 | E16 | E16 |               | Auto addressing failed, Number of indoor units connected are more than number set  |
| 51 | E17 | E17 |               | Group control wiring error, Main indoor unit not sending signal for sub indoor units   |
| 52 | E18 | E18 |               | Group control wiring error, Main indoor unit not receiving signal for sub indoor units   |
| 54 | E20 | E20 |               | Auto addressing failed, No indoor units connected  |
| 58 | E24 | E24 |               | Auto addressing failed, Error on sub outdoor unit  |
| 59 | E25 | E25 |               | Auto addressing failed, Error on outdoor unit address setting  |
| 5A | E26 | E26 |               | Auto addressing failed, Quantity of main and sub outdoor units do not correspond to the number set on main outdoor unit P.C.B. |
| 5D | E29 | E29 |               | Auto addressing failed, Sub outdoor unit not receiving comms for main outdoor unit   |
| 5F | E31 | E31 |               | Between units, Comms failure with MDC, does E31 remain after power is re-instated? If so replace PCB. & power PCB              |
| 61 | F01 | F01 | Sensor Faults | Indoor Heat Exch inlet temp sensor failure (E1)  |
| 62 | F02 | F02 |               | Indoor Heat Exch freeze temp sensor failure (E2)   |
| 63 | F03 | F03 |               | Indoor Heat Exch outlet temp sensor failure (E3)   |
| 64 | F04 | F04 |               | Outdoor Discharge temp sensor failure (TD) or (DISCH1)   |
| 65 | F05 | F05 |               | Outdoor Discharge temp sensor failure (DISCH2)   |
| 66 | F06 | F06 |               | Outdoor Heat Exch temp sensor failure (C1) or (EXG1)   |
| 67 | F07 | F07 |               | Outdoor Heat Exch temp sensor failure (C2) or (EXL1)   |

| D5         | L21 | L21 |                      | Gas type setup failure  |
| E1         | P01 | P01 | Indoor Unit Problems | Indoor unit fault, Fan motor thermal overload   |
| E2         | P02 | P02 |                      | Outdoor unit fault, Compressor motor thermal overload, over or under voltage  |
| E3         | P03 | P03 |                      | Outdoor unit fault, Compressor discharge temperature too high (Comp1) over 111 °C. Low on ref gas, exp valve, pipework damage.                                |
| E4         | P04 | P04 |                      | Outdoor unit fault, High pressure trip  |
| E5         | P05 | P05 |                      | Outdoor unit fault, Open phase on power supply. Check power on each phase, inverter pcb, control pcb  |
| E9         | P09 | P09 |                      | Indoor unit fault, Ceiling panel incorrectly wired  |
| EA         | P10 | P10 |                      | Indoor unit fault, Condensate float switch opened   |
| EB         | P11 | P11 |                      | GHP - Water Heat exch low temp (frost protection) fault   |
| EC         | P12 | P12 |                      | Indoor unit fault, Fan DC motor fault   |
| EE         | P14 | P14 |                      | Input from leak detector (If fitted)  |
| EF         | P15 | P15 |                      | Refrigerant loss, high discharge temp and EEV wide open and low compressor current draw.  |
| F0         | P16 | P16 |                      | Outdoor unit fault, Open phase on compressor power supply   |
| F1         | P17 | P17 |                      | Outdoor unit fault, Compressor discharge temperature too high (Comp2) over 111 degC. Low on ref gas, exp valve, pipework damage.                              |
| F2         | P18 | P18 |                      | Outdoor unit fault, By-pass valve failure   |
| F3         | P19 | P19 |                      | Outdoor unit fault, 4 way valve failure, i/door temp rises in cooling or falls in heating. Check wiring, coil, pcb output, valve operation.                   |
| F4         | P20 | P20 |                      | Ref gas, high temp/pressure fault, heat exch temp high C2, 55-60 degC, cooling over-load, sensor fault.   |
| F6         | P22 | P22 |                      | Outdoor unit fan motor fault, fan blade jammed, check connections, does fan turn freely, motor resistance 30-40ohm on each pair, no fan fault, yes pcb fault. |
| FA         | P26 | P26 |                      | Outdoor unit fault, Compressor overcurrent - check winding resistance, Inverter failure - check internal resistance term HIC + & - to UVW 200-300Kohm or      |
| FC         | P29 | P29 |                      | Outdoor unit fault, Inverter circuit fault - Motor-current Detection Circuit (MDC) fault, check comp windings, sensors C1 & TS, if ok possible pcb failure.   |
| FD         | P30 | P30 |                      | Indoor unit fault, System controller detected fault on sub indoor unit  |
| FF         | P31 | P31 |                      | Simultaneous operation multi control fault, Group controller fault  |
| 65535 (-1) | N/A | N/A | TO-RC-BAC-1          | Error in the communication of TO-RC-BAC-1device with the AC unit  |

In case you detect an error code not listed, contact your nearest Toshiba technical support service for more information on the error meaning.
